

# Viega Project Profile

NO. 111

“Copper pricing is cost prohibitive. ViegaPEX™ helps us save money on installation and labor.”

*Ricky Swindell, DynaTen Corporation*

The PureFlow® PEX Press Fitting System requires NO glue, NO solder, NO torches, and NO lubricants.

*Designed by architect, James Cheng, the prestigious 31-story Azure is located in uptown Dallas.*

## CHALLENGE

Committed to maximizing efficiency and controlling expenses, DynaTen Corporation needed to find a solution to the unstable raw material costs of copper.

## SOLUTION

After evaluating other systems, DynaTen chose ViegaPEX™ as the piping solution for all condo floors of the Azure. Using 1/2", 3/4", and 1" tubing, Ricky Swindell was impressed with the ease of installation and reliable connections from Viega. “We like the barbs on the Viega fittings and the two presses instead of one... it guarantees a more secure connection,” said Ricky Swindell. The PureFlow® PEX Press tool compresses the stainless steel sleeve around the tubing and fitting in two places, permanently securing them together. Every connection is perfectly water tight offering a leak-proof, solder-free connection.

## RESULTS

Easy installation and proven reliability, plus consumer friendly benefits make ViegaPEX the best choice for today's plumbing contractor. “We're bidding on a 50-story condominium where we anticipate using PEX. The flexibility of ViegaPEX eliminates most of the ninety-degree elbows necessary with copper,” said Swindell.
