

Viega Project Profile

NO. 115

“This is a fast-paced, high-pressure project.”

Don Erler, Project Coordinator, Frank Irish Co.

Construction crews are working around the clock to finish a new playing field for the Super Bowl Champion Indianapolis Colts.

As an added benefit of the time savings of ViegaproPress® Erler notes the visible difference between sweating and pressing, “No flux residue means no mess.”

CHALLENGE

Faced by a tight time schedule, contractor Frank Irish Co. is making every effort to keep construction of Lucas Oil Stadium on time and on budget.

SOLUTION

Don Erler, project coordinator for Frank Irish Co., said ProPress® was chosen for the potable water and natural gas lines of the stadium because they needed “the most cost-effective, quickest product to finish the job on time.” Not wanting to sacrifice quality, Frank Irish Co. relied on Viega’s unmatched product reliability and partner support. Utilizing multiple Viega product lines and the design services of the in-house Viega Technical Marketing team, Viega’s S-NO-Ice System was installed to warm the stadium’s loading docks, 1/2” - 4” ProPress lines were installed for the potable water lines, and 1/2” - 2” ProPressG™ fittings were installed for the natural gas lines.

RESULTS

Frank Irish Co. is now using ProPress on multiple jobs and actively bidding Viega products. And construction progress of the stadium project? “It’s moving forward,” said Erler, “We were convinced Viega products would get us there.”
