

Viega Project Profile

NO. 122

“When I saw ProPress® in action for the first time I knew I was never going to use anything else.”

Brian Bilo, Bilo Plumbing & Heating Co., Inc.

Bilo Plumbing & Heating Co., is a supporter of Viega's complete systems approach.

Kevin Bilo makes a ProPress connection at one of 11 Viega manifolds used to supply the 14,000-square-foot radiant heated space.

CHALLENGE

Glen Urquhart Private Elementary School broke ground in November 2006 for a new upper school complex. Bilo Plumbing & Heating Co. faced the difficult job of completing the plumbing and heating portion of the project by October 2007, in the time frames estimated.

SOLUTION

“I have used Viega for many years... the tubing, the fittings, all of it,” said Brian Bilo, long-term supporter of Viega products. Installing 1/2” - 2-1/2” ProPress® copper tubing and Viega ball valves to supply the water service lines and 11 Viega manifolds and FostaPEX™ tubing for the radiant layout, Bilo is convinced of Viega’s reliability. “The long-term lifespan of ProPress fittings is something I can count on. We have never experienced a leak,” said Bilo. “I’m blown away by the speed. We put all of the copper up in the ceiling in a matter of 3 days.” As a matter of fact, installation of the radiant system has gone just as smoothly. “We are actually ahead of schedule,” comments Bilo.

RESULTS

“I don’t even price out regular copper fittings any more. Every one of my trucks hauls ProPress fittings. Everything Bilo Plumbing & Heating uses is ProPress,” said Bilo.
