

Viega Project Profile

NO. 124

“Since converting to ProPress® we’ve had no recalls, no leaks, no drips, nothing.”

Michael Bernasconi, Central Cooling & Heating, Inc.

A turn-of-the-century home in Hingham, MA, is getting a plumbing and heating face lift.

CHALLENGE

Contracted to replace the outdated plumbing and heating systems of a luxury New England home, Central Cooling & Heating, Inc. had to perform this difficult task while the residence was owner-occupied. “We walked into a beautiful home that had a bunch of baseboard and an old boiler piped in every imaginable way,” said Michael Bernasconi.

SOLUTION

Central Cooling & Heating made the necessary updates utilizing the speed and reliability of 3/4” - 1-1/2” ProPress® potable water fittings, FostaPEX® tubing, Climate Panels® to heat the upstairs, Viega ProRadiant on slab in the basement, and S-NO-Ice™ for the driveway. “When I first came to Central Cooling and Heating, they were using very little ProPress. I wanted complete control of the product and I caused the switch,” said Bernasconi. Commenting on the use of Viega’s other premier systems Bernasconi states, “I really like the fitting system Viega has to offer for PEX and for copper. The form stability of FostaPEX is a plus too. It’s hard to keep the other stuff straight. Fosta is my preferred tubing choice.”

RESULTS

Thanks to the high-quality workmanship of Central Cooling & Heating, and the product availability and support from Viega, work was completed without disruption of the homeowner’s lives.
