- Max. Operating Pressure:
200 PSI

Viega introduces 4 new XL-C PxPxP Tee configurations into its ProPress product line.

Viega's XL-C PxPxP Tee is designed for use with the ProPress copper joining system. The new configurations give designers and installers more flexibility when installing systems that require a variety of branch sizes.

The XL-C PxPxP Tee uses Viega's press end technology, eliminating the need for threading or soldering connections and saving valuable time. The ProPress copper joining system is the fast and easy way to install copper systems. This product introduction compliments the existing ProPress line, which includes over 550 fittings.

Made of the finest quality copper material, the XL-C PxPxP Tee incorporates Viega's patented Smart Connect feature. The Smart Connect feature is the fast and easy way for installers to identify unpressed connections during pressure testing.

Stock Code	Size	List Price
20732	3 x 2 x 2	\$ 289.95
