Viega's Next Generation of PEX Press Fittings

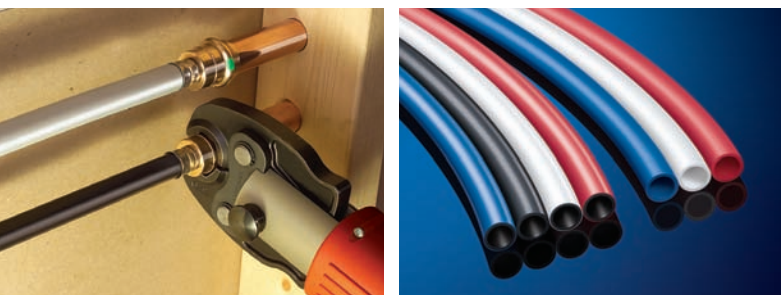

# Viega PureFlow PEX Fittings

**Now Approved  
for Fire Sprinkler**

*In addition to the current offerings, specially designed fittings have been added for residential fire sprinkler applications.*

*PEX Press fittings are designed to be compatible with ProPress® fittings for copper to PEX hybrid installations.*

*All PEX Press fittings are compatible with ViegaPEX™, ViegaPEX™ Ultra, FostaPEX® and ViegaPEX™ Barrier tubing.*

## Advantages:

- Same trusted Viega bronze material
- Resistant to corrosion and dezincification
- Attached sleeve for quick installation
- No assembly required
- Professional appearance
- Color coded rings for each dimension
- Coordinates with press tool handle colors
- Increased size ranges  
5/16", 3/8", 1/2", 5/8", 3/4", 1", 1¼" & 1½"
- New 5/16" press tool and fittings for ProRadiant™

## Viega's Next Generation of PEX Press Technology

The PureFlow PEX Press Fitting System requires NO glue, NO solder, NO torches and NO lubricants. It is unaffected by installation temperature extremes because it does not rely on the expansion and contraction of the tubing to complete the joint. It can be tested immediately so there is no waiting for glue to dry, fittings to cool or plastic rings to contract.

The PureFlow Plumbing System press joining technology has been used by Viega in Europe since 1983. It was introduced to the North American market in 1999. The strength and quality of our system has been proven for over 25 years. The flexibility and easy connections of the PureFlow Plumbing System make it ideal for new or retrofit applications, especially where new tubing is installed in existing finished walls.

PureFlow Bronze PEX Press fittings are the ultimate PEX fitting solution for contractors and builders nationwide. The bronze material is more corrosion-resistant than copper or brass and has provided millions of durable connections nationwide.

*The Viega PureFlow PEX Press Fitting has been redesigned with added features and benefits. It now has an attached sleeve and color coded ring for even easier installation on the job site. In addition, these fittings are tested and listed for use in potable water applications, radiant systems and residential fire sprinkler installations.*

## New Approved Application

- Approved for fire sprinkler according to NFPA 13D
- Special fittings for fire sprinkler applications
- Designed for combination system installations
